

BAUHAUS CORPORATE CHALLENGE EUROPE

Information about the 'BCCE' App

The 'BCCE' app is a tracking app specially designed for the BAUHAUS Corporate Challenge Europe, which enables participants to compete against all BAUHAUS staff and colleagues.

Taking part in this entirely virtual event is easy. However, there are just a few steps to get started:

1. Download the BCCE app (Provider: Quevita AG)

Scan the relevant QR code or click on the correct link and install the app.

Please note: Before you start, please install or update the BCCE app to the latest version to ensure that all features are available and that your tracking works as smoothly as possible.

For iPhone (iOS)

For Android

👍 App: BCCE

👎 App: viRACE

Please download the correct app!

2. Registration in the app

Once you have downloaded and installed the app, register within it. The access code for registering for the challenge is: **BCCE26**

After successful registration, you will receive a welcome email at the email address you provided. If you haven't already done so, please log in to the app using your personal login details.

You should now be automatically registered for both events, 'BCCE Running' and 'BCCE Cycling', and see them listed in the overview.

3. Is your device ready to go?

You can check the settings in the app under 'Settings' → 'Is my device ready to go?'. There, you can see at a glance whether everything is configured correctly and, if necessary, go straight to the relevant settings on your phone.

4. 🚀 Start your challenge

You're ready, and the challenge week is here: choose between '**BCCE Running**' or '**BCCE Cycling**', depending on whether you'd prefer to run/walk or cycle. Then tap the red button to start tracking and rack up kilometres for a good cause! When you've finished your activity, you can tap the red button at the bottom to stop tracking again. You can start or stop an activity as often as you like.

Other things to bear in mind

- System requirements:
iPhone (iOS): Requires iOS 16 or later.
Android: Requires Android 13 or later.
- Please only use one tracking app at a time. If you're already recording your activity with the BCCE app, no other running or tracking apps should be running at the same time.
- Make sure your smartphone's battery is fully charged.
A battery level that is too low can prevent apps from running in the background (even if the battery level hasn't yet reached 0%). Make sure you have disabled power-saving mode.
- Make sure that mobile data is enabled and that the necessary access permissions (e.g. location tracking) have been granted.
(Settings → BCCE → Location → 'Always' or 'Whilst using the app'.)
- As a GPS signal is required, tracking can only take place outdoors and where there is a sufficiently strong signal. Make sure that mobile data is enabled and that you choose a route where an internet connection is guaranteed. Only start tracking once you are outdoors and, to be on the safe side, disable the Wi-Fi function.
- Insurance is the responsibility of the participants.
- You can find information on important app settings in various languages here:

Alternative to the app

The best way to take part in the challenge is via the BCCE app.

However, you can also run using your GPS watch instead of the app. To do this, connect your watch via 'Settings' / 'Linked Apps' in your app. Your activity will then be automatically linked to the challenge and you'll just need to confirm this in the app.
